

## Performance Monitoring Tool

The Performance Monitoring Tool can be pulled for any date range (monthly, quarterly, annually, YTD, etc.)

- Once in HMIS, Select Reports, then under Program-Based Reports, select [OUTS-102] Performance Monitoring V2. Click Run.

- Select the Program, then the appropriate date range. Printing as a Web Page will enable you to click on each percentage/value to drill down to clients records that make up that number. This is a good option if you are analyzing the data. However, if you need to print a hard copy, printing as a PDF is preferred.
